Tomasz **Kobus**

DevOps & MLOps Engineer

About

Engineer at the intersection of DevOps and MLOps. I build Kursor, a fleet and settlement system for PROBUS, and run my own NixOS infrastructure. Creator of CellForge — an open-source notebook IDE in Rust. InkWatchy contributor.

Languages

Polish — Native

English — C1 Cambridge, 2022

Driving Licence

Category B

Core Stack

Docker / Compose · Linux (Debian/Arch) · Cloudflare Tunnels · NVIDIA / CUDA · GitHub Actions · SSH Hardening · Python / Bash · Git

Other

Rust · TypeScript / React · PyTorch · C++ / ESP32 · Nginx · MariaDB / Postgres

Work Experience

since 07.2026 — **Logistics & IT Specialist**

PROBUS Sp. z o.o. — Żędowice

- Planning and coordinating international passenger transport on Poland–Germany routes
- General IT support — day-to-day technical assistance across the company
- Developing and deploying Kursor (Rust, React, PostgreSQL)

2025 – 2026 — **Programming Instructor**

Giganci Programowania sp. z o.o. — Częstochowa

- Taught programming classes for kids aged 9-12 (Scratch, Python, Lua, Minecraft Education)
- Managed a fleet of educational workstations (S0-S19, trainer/student split) — setup, patching, Veyon classroom monitoring
- Deployed and maintained educational Minecraft servers on self-hosted infrastructure
- *Stack: Python, Docker, Linux, Veyon*

07.2024 — **IT Intern**

Eurobox Polska Sp. z o.o. — Lubliniec

- Helpdesk and hardware/software diagnostics, automation of administrative tasks (application autostart), workstation setup

Projects

2026 – present — **Kursor — fleet and settlement system for PROBUS Sp. z o.o.**

Layershift (development and maintenance) — Production

- Fleet, service intervals from configurable rules, driver settlements (mobile forms, PDF printouts via Typst), route pricing; replaced Excel sheets
- GPS and RCS integrations (read-only), client portal with schedule, reservations and GPS, licence-enabled modules incl. the JEST edition for field crews
- *Stack: Rust (axum, sqlx), PostgreSQL, React, TypeScript, Vite, Typst, Docker, Cloudflare Tunnel*

2023 – present — **Self-hosted server infrastructure**

Personal project — Production 24/7

- NixOS host (flake), services in Docker Compose, NVIDIA GPU; access only through Cloudflare Tunnels, key-only SSH, fail2ban
- Monitoring (Prometheus, Grafana, an independent second point on a separate device), btrfs with hourly snapshots; *Stack: NixOS, Docker Compose, NVIDIA Container Toolkit, Prometheus*

2025 – present — **CellForge — Notebook IDE in Rust**

github.com/Subbok/CellForge — Open Source

- JupyterLab alternative in Rust + React — native implementation of the Jupyter messaging protocol
- Backend: 7 Rust crates (axum + tokio + zeromq-rs), 186+ tests; real-time collaboration via Yjs CRDT (shared editing, remote cursors, per-notebook kernel sharing)
- PDF export via Typst (~50× faster than LaTeX), reactive execution with an AST dependency analyzer, hub mode with JWT auth and a plugin system
- CI/CD: GitHub Actions + GHCR, pre-built image with Python 3.12 + PyTorch + CUDA; *Stack: Rust, React 19, TypeScript, Yjs CRDT, ZeroMQ, Typst, CUDA*

2025 – 2026 — **LLM Benchmark Pipeline — Master's Thesis**

github.com/Subbok/llm-benchmark-thesis — Defended 2026

- Multi-dimensional evaluation of 10 LLMs (6 commercial + 4 local) across 80 tasks — 800 model calls
- 4 metrics: Pass@1 (unit tests), CodeBLEU (AST + dataflow), BERTScore (RoBERTa-large), G-Eval 1-100 (LLM-as-a-Judge)
- Models: Claude Opus 4.6, GPT-5.2, Gemini 3.1 Pro, Grok 4, DeepSeek V3.2, KIMI K2.5 + local (Qwen2.5, Gemma3, Mistral-Nemo, Llama3.2 via Ollama)
- GPU-accelerated evaluation (CUDA/PyTorch) with CPU fallback, sandboxed code execution, master Bash pipeline with conda env management; *Stack: Python, Bash, PyTorch, CUDA, Ollama, OpenRouter API, HuggingFace, tree-sitter*

2024 – present — **InkWatchy — open source contributor**

github.com/Szybet/InkWatchy — Open Source

- Complete i18n system (EN/PL/DE/SK) for an ESP32 e-ink smartwatch firmware — 116+ keys with compile-time validation, zero runtime overhead
- Rewrote the calendar module (multi-URL import, recurring events, timezones), QuickAlarm system; *Stack: C++, Arduino, ESP32*

Education

2025 – 2026 — **Computer Science — Artificial Intelligence & Data Science (M.Sc. Eng.)**

Częstochowa University of Technology — Częstochowa

Thesis: *"Comparative evaluation of selected large language models on text and code generation tasks"* (defended 2026). Coursework: Computer Vision, NLP, Deep Learning.

2020 – 2025 — **Computer Science — Computer Networks (B.Eng.)**

Częstochowa University of Technology — Częstochowa

Thesis: *"Comparison of 3D printer firmware — Marlin vs Klipper"*. Coursework: System Security, Datacenter Infrastructure, OS Administration.
